

**SAP® Certified Mobile App – works on SAP ECC and S/4HANA.**

### Mobile Operator Rounds users can see benefits such as:

- **40%** less unplanned downtime and production delays
- **55%** reduction in preventable failures and outages
- **40%** reduction in fixed asset service and maintenance costs
- **35%** increase in operator efficiency
- **80%** cut in safety incidents

## Mobile Operator Rounds – Digital Maintenance and Safety Checklists

### BOOSTING PLANT UPTIME AND COMPLIANCE WHILE CUTTING COSTLY SAFETY INCIDENTS

*Each minute an industrial plant remains out of production costs that company tens of thousands of dollars in lost revenues. Unscheduled downtime also puts extra pressure on profit margins and endangers order fulfillment, straining customer relationships. Meanwhile, plants also face worker health and safety risks as well as the need to ensure regulatory compliance. Traditional means of conducting operator rounds, safety inspections and risk assessments have proven to be slow and tedious. Critical data often doesn't reach decision makers in a timely fashion, delaying remedial action and putting the plant at greater risk of preventable equipment failures, unscheduled downtime and safety incidents. Regulatory compliance efforts can be compromised.*

### OPERATOR ROUNDS AND INSPECTIONS

Many plants still find themselves stuck in the break-fix cycle. They react to issues after they happen instead of proactively conducting preventative maintenance work to forestall failures. This puts them at much greater risk for unplanned downtime and production stops. Traditional operator rounds and inspections are time-consuming, laborious and error-prone. Even when potential issues are found, the inspection results too often reach decision makers too late for preventative action.

### REGULATORY COMPLIANCE

Federal, state and local agencies are taking a fresh look at environmental, health and safety (EHS) regulations. There is now a greater emphasis in every jurisdiction on ensuring workers are protected on the job and that industrial plants don't have a negative impact on their neighboring communities. Industrial facilities using traditional static data collection methods often fail to collect all necessary EHS compliance information. This information is also tedious to enter into a back-office system of record (SAP), meaning it frequently takes more time for data to reach compliance managers, preventing remedial action. This added delay exposes the plant to greater risks

for incidents and to potential regulatory fines, sanctions and/or lawsuits.

### OVERCOME THESE CHALLENGES

Conducting digitalized operator rounds and compliance inspections using mobile devices offers a speedy, accurate solution. Configurable, digital operator rounds and inspection checklists – editable to meet changing business needs – can provide quick, thorough and accurate information to key decision makers in real time. Work orders can be issued in mere moments to correct a maintenance or compliance issue before it becomes a downtime-producing problem or results in an EHS incident.

Innovapptive – a Connected Worker platform provider – believes in getting jobs done better, faster, cheaper and safer. To that end, we've developed Mobile Operator Rounds. Mobile Operator Rounds empowers the planner to plan the rounds, and the front-line worker to collect key operational, performance and safety data using mobile devices, upload that information immediately into the back-office system and disseminate it to decision makers for real time analysis and action on any maintenance or compliance issue. Mobile Operator Rounds digital checklists and inspection forms are easy-to-configure, easy-to-use thanks to no-code/low-code technology. Flip the page to learn more ...

## FEATURES

- Supports Android, iOS and Windows applications
- Runs on Tablet Devices, Mobiles and Desktops
- Works in Online or Offline modes
- Automated workflows integrated with system of records
- Prominent metrics correspond with accepted or assigned jobs
- Push changes in real-time
- Real-time data validation
- Role-based access
- Integrates with hands-free devices
- Configurable user interface and custom screens

## FUNCTIONALITIES

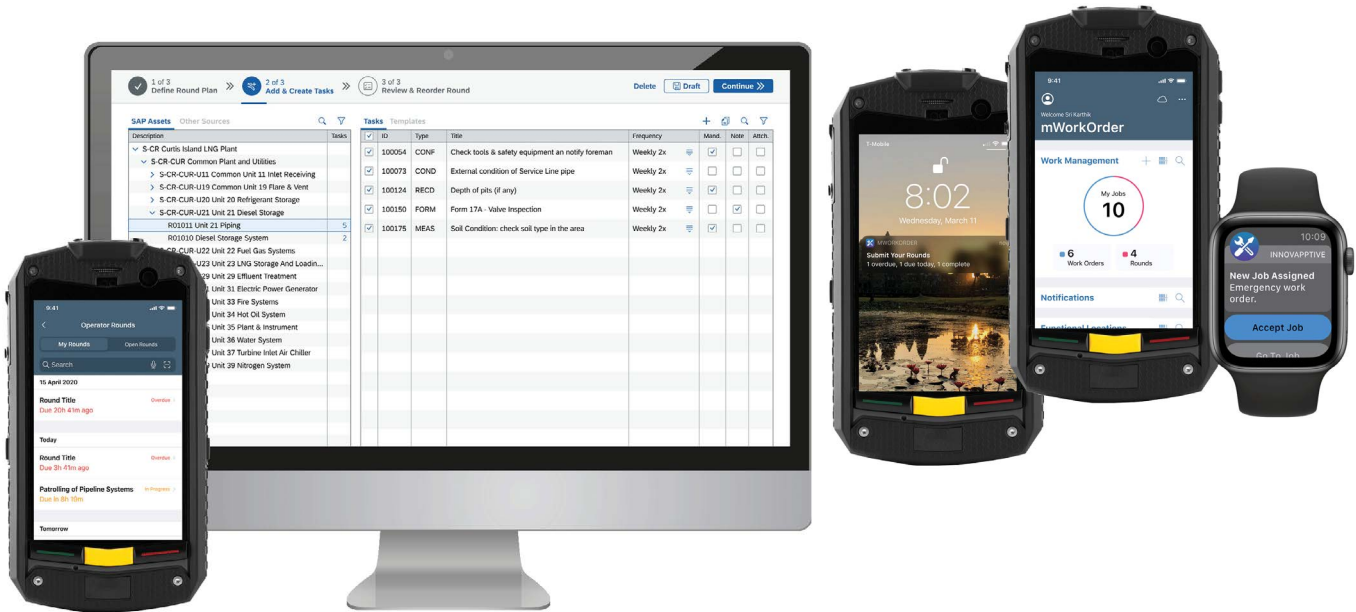

- Simple, easy-to-use, mobile user experience
- Create notifications, take pictures and add notes
- Configure workflows and collect data in the field
- Define round plans, add and create tasks
- Manage tasks, crews and roles
- Review and reorder rounds
- Consolidate all jobs assigned to a user
- Generate reports to analyze operator efficiency
- Record measurement points and get alerts when data is out of a defined range
- Access equipment diagrams and operating history
- List of assets mimic your organization's asset structure and in order as planned
- Number of tasks and task progress indicated against each asset
- Attach note or pictures during or at the end of the round
- Mandatory tasks cannot be skipped without a note

## WHAT USERS ARE SAYING ABOUT MOBILE OPERATOR ROUNDS

“Post-Innovapptive, our operator rounds are much more accurate and complete. Our inspectors are checking more issues and reporting problems to managers in real time, eliminating costly form processing delays that too often led to failures and downtime.”

**Dave Barnhar**  
Maintenance Director
