

## BUILDING A DIY CONNECTED WORKER SOLUTION?

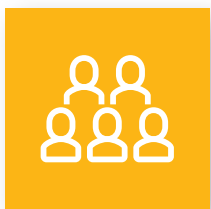

### ASK YOURSELF A FEW QUESTIONS FIRST

Thinking about building a do-it-yourself (DIY) connected worker solution? You'll need to answer some important questions before you start.

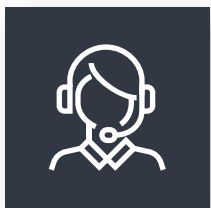

### Can You Spare the Time?

You'll need to invest a lot of time to get your do-it-yourself solution up and running. Is your timeframe realistic? Are you ready for delays, reworks and changes in direction?

### Do You Have Sufficient Staff?

Do you have enough skilled programmers and coders to develop a mobile solution and take care of your everyday IT needs, too? Will you need to hire new staff for one or both tasks?

### What About Support?

The upgrade cycle for DIY mobile digital solutions differs greatly from third-party products. You'll have to convert part of your IT department into support staff or hire more people to create one.

### What Will Be Your ROI?

Will your frontline workers use the DIY solution once it's finished? How will you measure return on investment (ROI)? What would be a suitable ROI?

### What's Your Ultimate Mission?

What's your area of expertise? Manufacturing your product and servicing your customers? Or building connected worker solutions?

## WHY GO IT ALONE?

Why risk building a DIY platform when there are experienced third-party vendors offering connected worker solutions? When looking at a third-party platform, you'll want a solution that:

- Works right out of the box
- Delivers quick deployment time
- Enjoys near universal adoption
- Doesn't require a large support staff
- Integrates with legacy systems (SAP-certified)
- Offers easy scalability to grow as you grow
