INNOVAPPTIVE

SAP® Certified
Mobile App

SAP® Certified Mobile App – works on SAP ECC and S/4HANA.

mInventory offers a host of tangible business benefits, including:

- Improved warehouse productivity
- Improved collaboration and decision making
- Improved customer service
- Paperless warehouse operations
- Eliminate non-value-added activities
- Increased inventory accuracy
- Reduced inventory carrying costs
- Improved safety using digital checklists
- Faster user adoption

mInventory for SAP Extended Warehouse Management (EWM)

RECOGNIZE THESE SUPPLY CHAIN CHALLENGES?

Businesses are faced with unrelenting margin pressure and the need to do more with less. Customers are demanding ever shorter lead times, more product promotions, new channels to market and enhanced product traceability. More than ever today's customers are king and supply chains need to adapt quickly.

PROCESS COMPLEXITY

Warehouse operations must respond to constant business changes. There is pressure to boost productivity and cut warehouse unit costs. But increasing customer service requirements are adding complexity, which can drive productivity and unit costs in the wrong direction. Imagine a warehouse designed to serve large retailers and wholesalers with full pallet quantities that now must pick small, consumer e-commerce orders. Warehouse layout, processes and systems need to be flexible to respond quickly to new supply chain demands.

INCREASING PRODUCTIVITY

Warehouse productivity tops the list of any manager's key performance indicators (KPIs). . In simple terms, higher productivity means doing more with less, thereby minimizing unit warehouse costs.

LABOR SHORTAGES

Filling warehouse jobs can be a problem. Demand for warehousing staff is increasing to serve the labor-intensive e-commerce sector. As Baby Boomer retire, it's proving difficult to attract Millennials and Gen Z to warehouse jobs. The industry is addressing labor shortages through automation and efficiency, but will need to be more creative to bring in younger workers.

OUTDATED TECHNOLOGY

Highly automated warehouses with robots, sky-high racking and miles of conveyors may capture headlines, but are the exception. Most warehouses depend on people using basic material-handling equipment to complete goods receipt, putaway, picking, loading and internal movements. It's common to see many paper-based processes going on in parallel, from receiving goods to inventory counting. Paper-based processes are time consuming, inaccurate and lead to a disconnect between physical processes and the system of record. Additionally, first-generation barcode scanners still in use are based on old Windows operating systems close to end of life.

OVERCOME THESE CHALLENGES

Innovapptive is a mobile-first pioneer with a strong track record of helping organizations rise to these business challenges and improve warehouse operations using the latest technology. Innovapptive's mobile inventory management solution, mInventory, is a leap forward from older mobile solutions and supports business agility. Organizations can now deploy an end-to-end digital warehouse solution and achieve a complete paperless operation. mInventory comes bundled with a no-code platform – **RACE™ (Rapid App Configurator Engine)** – that allows instant changes to menus, screens and fields without needing to write any code.

mInventory integrates with all SAP's warehouse modules, including Extended Warehouse Management (EWM), providing your warehouse team with real-time operational visibility, improved collaboration and better decision making, all in the palm of a hand. The solution offers agility, flexibility and seamless integration between physical warehouse operations and SAP.

FEATURES

- Supports Android, iOS and Windows applications
- Runs on Tablet Devices, Mobiles and Desktops
- Works in Online or Offline modes
- Auto-identification – barcodes, QR, RFID, OCR
- Automated workflows integrated with the system of record
- Push changes in real-time
- Real-time data validation
- Role-based access
- Integrates with hands-free devices
- Configurable user interface and custom screens

FUNCTIONALITIES

- Simple, easy-to-use, mobile user experience
- Configure workflows and collect data from the floor
- Mobile and static printing
- Capture digital signatures
- Perform and manage physical inventory counting
- Manage stock transfers across plants, storage locations, warehouses and bins
- Monitor warehouse stock levels
- Receive and putaway goods
- Picking and Packing
- Loading & Goods Issue
- Operational dashboard to monitor real-time warehouse performance

WHAT USERS ARE SAYING ABOUT *mInventory*

"Thanks to mInventory, we have far greater visibility into our overall warehouse process. Our inventory is more accurate, cutting carrying costs. Our staff has seen tremendous gains in productivity, resulting in lower unit costs. Collaboration has improved and we're making more informed decisions. We couldn't be happier."

VP of Supply Chain
